Overview of our Cabling Products Verification Programs

When a Manufacturer enters a cabling product into a verification program they must provide an Initial Qualification sample to Intertek. The sample is then independently tested to the specifications of the appropriate standard (or standards). If found to meet the requirements of the standard, an Intertek field representative is then sent to the cable's manufacturing location to independently select a Final Qualification sample for further independent testing. Then, assuming the second cable is found to meet the performance requirements, the cable will be entered into the ETL Verification Program. From this point forward, the cabling product may be marked by the Manufacturer as "ETL Verified". The Manufacturing facility is subject to quarterly audits and follow-up testing of the cabling products to ensure ongoing compliance. So long as the cabling product continues to meet the minimum requirements of the standard, it will remain in the verification program and may be marked accordingly by the Manufacturer.

Surface Printing on ETL Verified Cable Products

Although surface printing is not a requirement of the ETL Verification Program for Cable, it is highly recommended.

The ETL verification should be at the end of the print legend and shall not be followed by any other designation or rating.

For ANSI/TIA-568.2-D Cable Verification the legend **shall** contain; "ETL Verified to ANSI/TIA-568.2-D Category X". "X" may be 3, 5e, 6, 6A or Cat 8. Category may be abbreviated "Cat". In all cases the Category must be included in the legend as applicable.

In the case of a Category, which is in draft stage, the print legend shall read: "ETL Verified to TIA-568.2-D Category # draft YYYY". "YYYY" is the applicable alphanumeric draft designation and **shall** be included.

In the case of cord cables, the words "cord cable" or "patch cable" **shall** immediately follow the Category # designation. Cord cables are cables intended to manufacture modular cords and may be made of stranded or solid cables.

Other standards such as ISO/IEC 11801-1 or EN 50173-1 may be included if the products are ETL Verified to these standards.

The exact order of the wording may be changed (see alternate below) if approved by the ETL Program Administrator or Technical Manager.

Examples of print legends to be used:

ETL Verified to ANSI/TIA-568.2-D Category 3
ETL Verified to ANSI/TIA-568.2-D Category 3 Cord Cable
ETL Verified to ANSI/TIA-568.2-D Category 5e
ETL Verified to ANSI/TIA-568.2-D Category 5e Cord Cable

ETL Verified to ANSI/TIA-568.2-D Category 6 Cord Cable
ETL Verified to ANSI/TIA-568.2-D Category 6
ETL Verified to ANSI/TIA-568.2-D Category 6 Cord Cable
